Basic Problem : Triangulation

Triangulation is not easy

Depth map required ?

Disparity is different for different depths

Object further than imaginary screen plane

Object nearer than imaginary screen plane

Depth map required ?

Disparity calculation requires depth map:

$$D = \frac{B(Z - f)}{Z}$$

$$O_{i,j} = \sum_d I_{i,j}^d D_{i,j}^d$$

$$O_{i,j+D_{ij}} = I_{i,j}.$$

$$L = |O - Y|$$

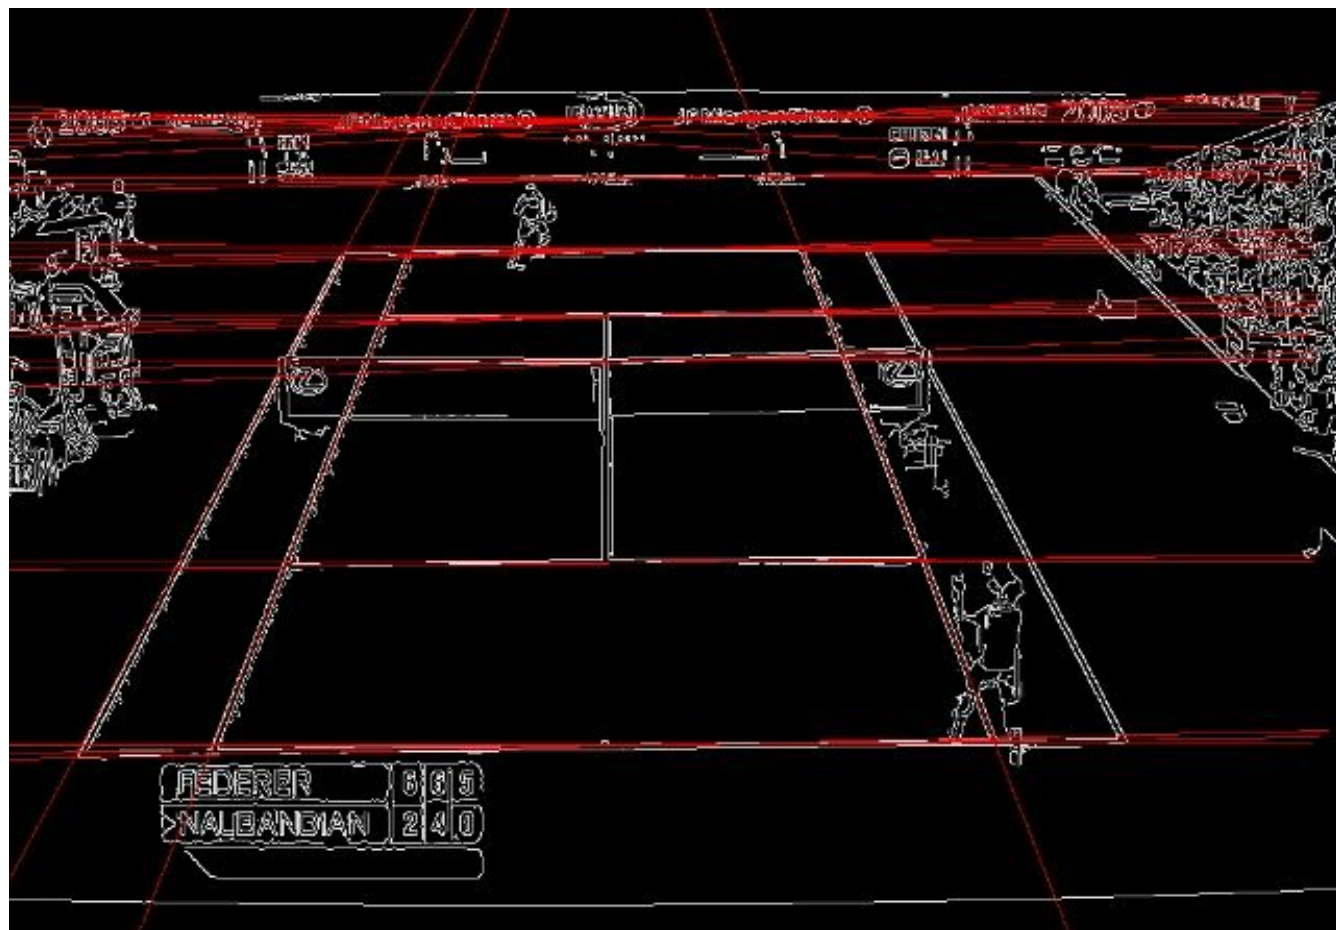

Basic Problem : Camera Calibration

$$\begin{bmatrix} x_c \\ y_c \\ f \end{bmatrix} = k \begin{bmatrix} X_c \\ Y_c \\ Z_c \end{bmatrix} \quad \text{or} \quad \begin{bmatrix} x_c \\ y_c \\ f \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix} \begin{bmatrix} X_c \\ Y_c \\ Z_c \\ 1 \end{bmatrix}$$

$$k = f/Z_c$$

Basic Problem : Camera Calibration

Implementation1 : Approximate 3D

Why DNN's ?

Required for understanding the basic structure of the objects in the image

Possibly the approach used by humans for depth estimation using single eye

Learns directly on the stereo pair instead of depth maps

Learning on depth maps does not work as not enough data

Cannot use direct regression from left to right image

Plenty of data available in form of 3D movies.

Thank You
